

Admin Tools: BPH/CPH Parameter Error Finder

Programmed Result of Tool:

There are a few times when a loaded family has the BOM_PRODUCT_HOST or CONSTRUCTION_PRODUCT_HOST parameter mapped within it which throws a read only error for the parameter when being updated by other EDGE^R code.

This tool, therefore, scans the model and checks for any such element that already has these parameters mapped and provides the names of these elements to the user for further review.

Steps to Perform tool Operation:

The user clicks the tool and the model is then scanned for possible problem families.

- 1) User clicks the BPH/CPH Parameter Error Finder icon.
- 2) The user is then presented with a display indicating which families (if any) have problematic parameter mappings.

Known Limitations:

- NA
