

# Visibility Tools

## **Programmed Result of Tool:**

These tools (multiple) turn on or off the visibility of the selected component using Visibility Graphics within the current view. Note that turning off elements using these tools only affects their visibility in the current view and will not exclude them from schedules.

## **Steps to Perform tool Operation:**

*The tool will automatically update the Visibility Graphics of the current view with the appropriate on/off state of the selected component.*

1) User clicks the toggle of the desired component to turn on or off visibility for that component in the active view.

## **Known Limitations:**

- NA
