

# Ticket Tools: Control Number Populator

## **Programmed Result of Tool:**

This tool will scan the model and collect all control numbers of elements with the same CONTROL\_MARK value as the Assembly itself. These values are then added to the sheet as a custom text box in the location specified by the user.

## **Steps to Perform tool Operation:**

*The user selects the tool, then is prompted for a text box placement on the sheet.*

- 1) User clicks the Control Number Populator icon.
- 2) The tool automatically prompts the user for a location of a custom text box where the controls numbers are added to the sheet.

## **Known Limitations:**

- The numbers generated by this tool are not automatically updated should a mark number change in the model and therefore the control numbers linked with an assembly.
