

Ticket Tools: Copy Ticket Views

Programmed Result of Tool:

This tool will copy all selected Legend Views and Symbols in an Assembly ticket sheet and open a dialog for the user to select subsequent sheets to paste the copied elements. The selected copy-to sheets will then have all copied elements inserted at the same relative location as the original sheet elements.

Steps to Perform tool Operation:

The user selects the tool, then the user selects the elements in the sheet to be copied. The user then selects the desired copy-to sheets from a dialog and the tool automatically adds the selected elements to those sheets in the same relative location.

- 1) User clicks the Copy Ticket Views icon.
- 2) The user then selects the desired Legend Views and/or Symbols on the sheet for copying.
- 3) The user then selects the desired copy-to sheets from a dialog.

Known Limitations:

- This tool requires the active view be an Assembly sheet view
- This tool requires the copy elements to be Legend Views and/or Symbols and limits the potential selection of elements to these categories due to the limitations of other view types being limited to one sheet only when being inserted.
